

# 7. HOW TO CARE FOR YOUR BOAT

## 7.6 STORAGE

To prepare your electric boat for outdoor storage make sure that there is no residual water in the hull. Drain any water out of the front and rear flotation tanks by removing drain plugs. Lower roof assembly and install a boat cover.

During winter storage or extended storage, it is recommended to remove the batteries and keep them in a dry area where the temperature does not drop below freezing point. Keep the batteries fully charged by periodically putting them on trickle charge.
